The Ins and Outs of Time Travel

Part 6: Synchronic Matter

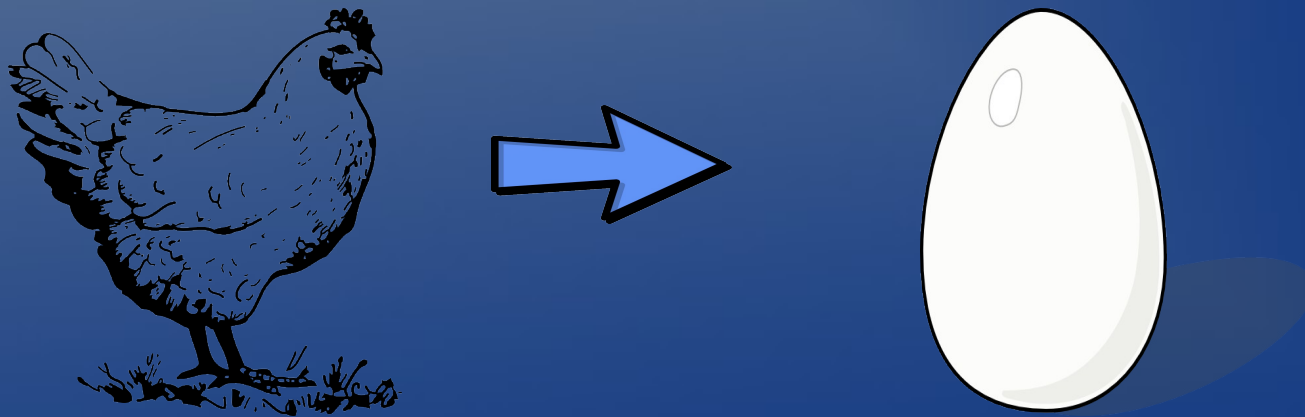

Vs.

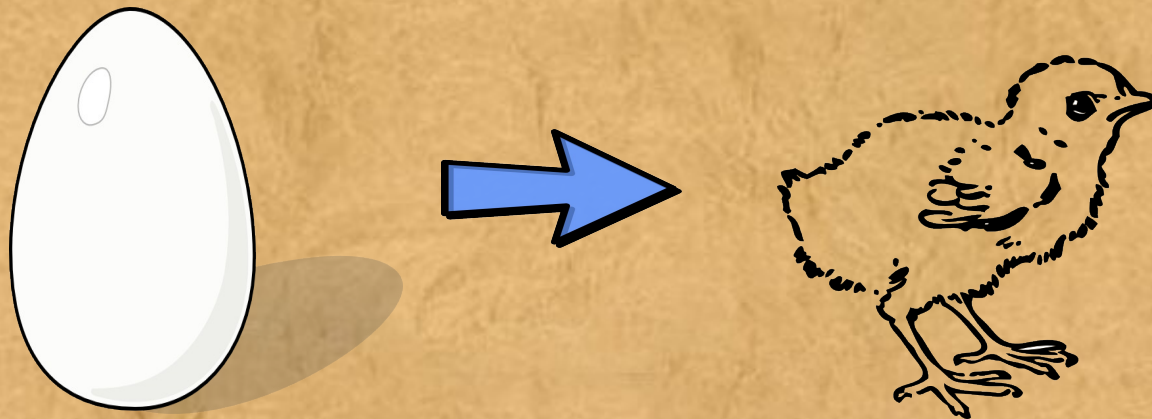

Tale of the Synchronic Chicken

- We begin with a chicken.
- Which lays an egg.
- An egg we will send back in time.

YE OLDEN DAYS

- In the past, the egg arrives.
- It is incubated until it hatches.
- The chick is well fed and taken care of until it grows . . .

... Into the Chicken of Today

- The *same* chicken we had before.
- Which lays an egg.
- An egg we will send back in time.

The Cycle Repeats Infinitely

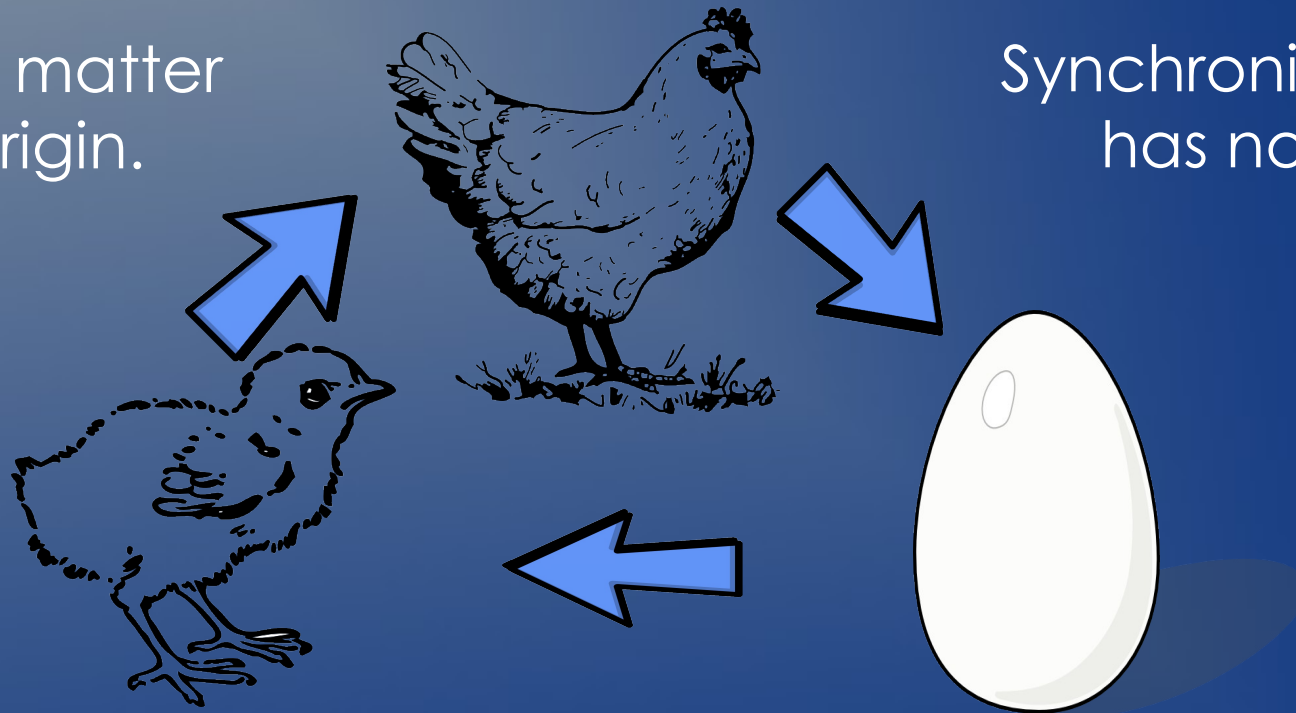

- Our chicken exists because it will exist.
- It exists, because it's its own mother.

The Chicken is Synchronic Matter

- Synchronic matter is matter that only exists in a temporal loop.

Synchronic matter
has no origin.

Synchronic matter
has no end.

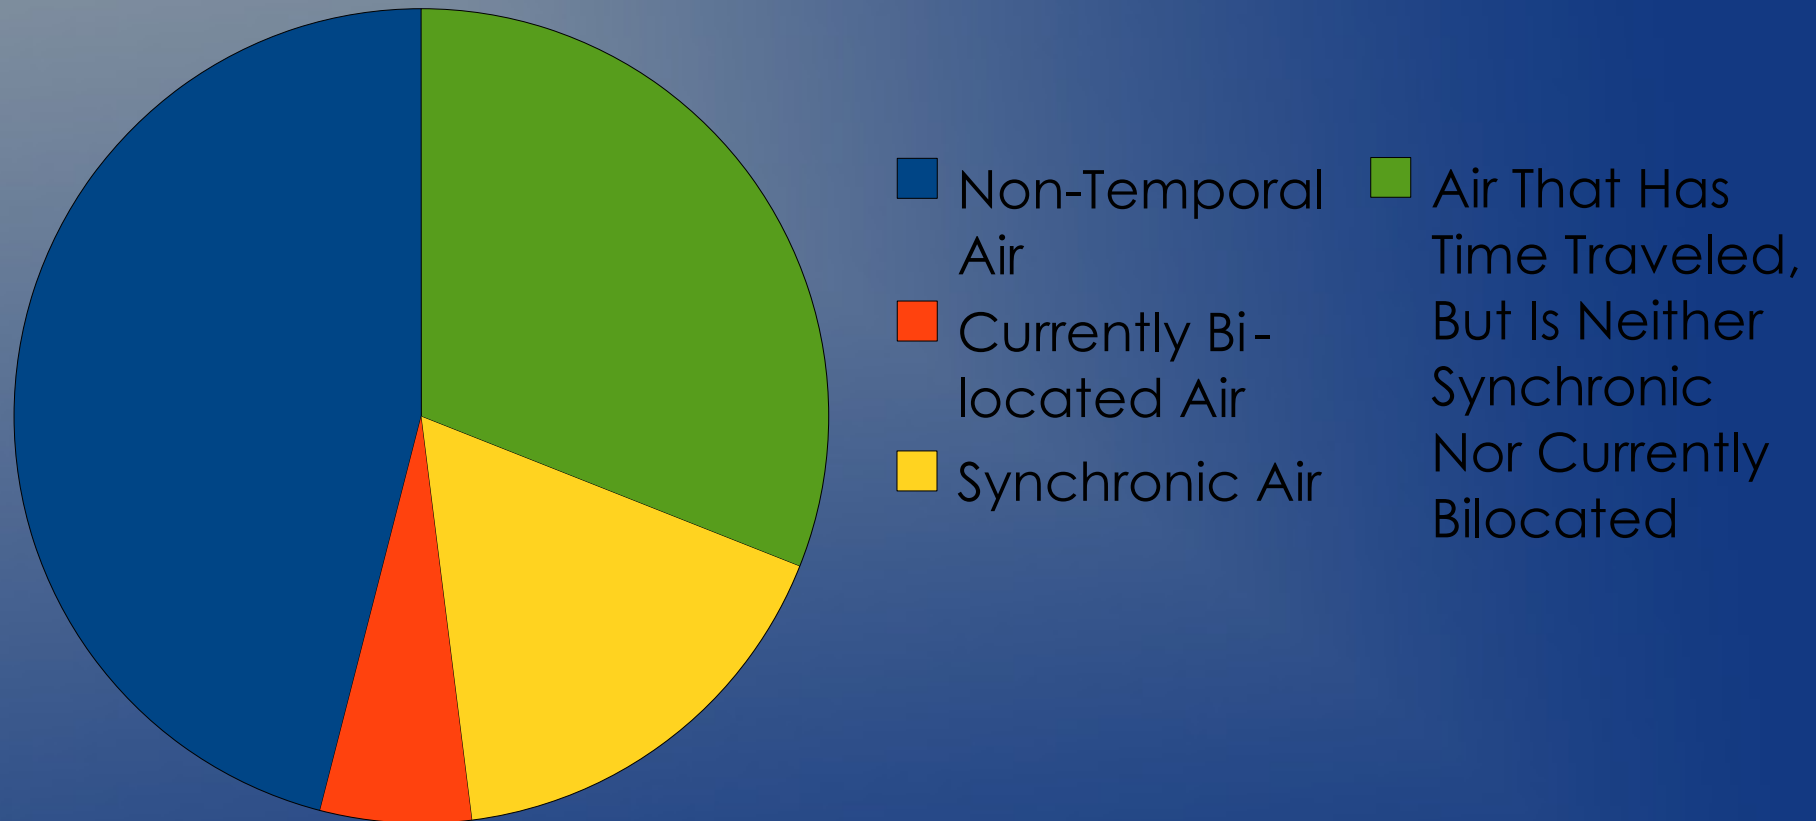

- It is a natural byproduct of time travel.

Take a Deep Breath

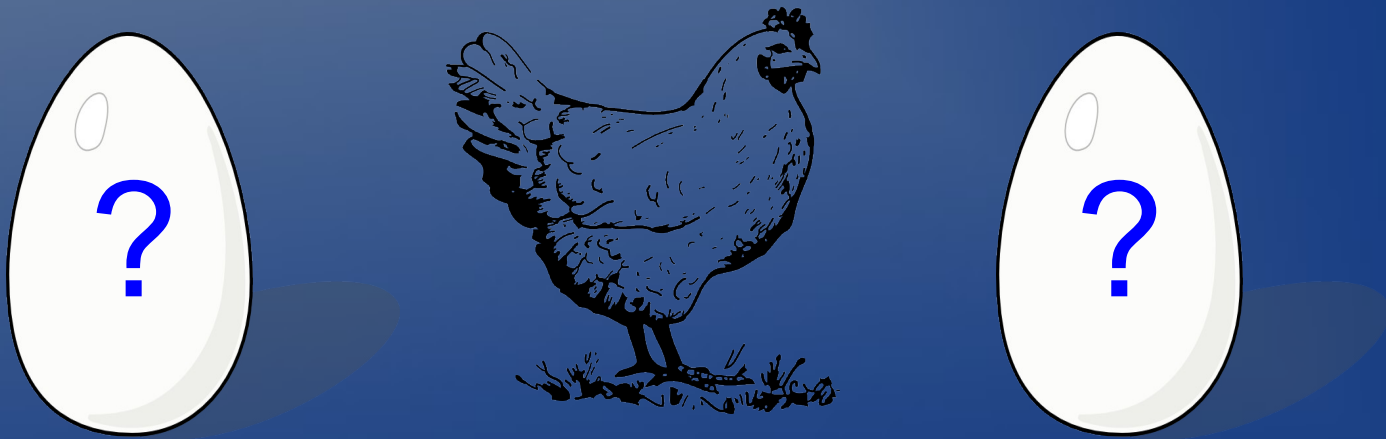

- Now travel back in time and breathe out.
- How many times have you done this?
- How many others have done this?
- How much of the air that you are breathing right now has traveled in time?

17% of All the Air We Breathe Today Is Synchronic Matter

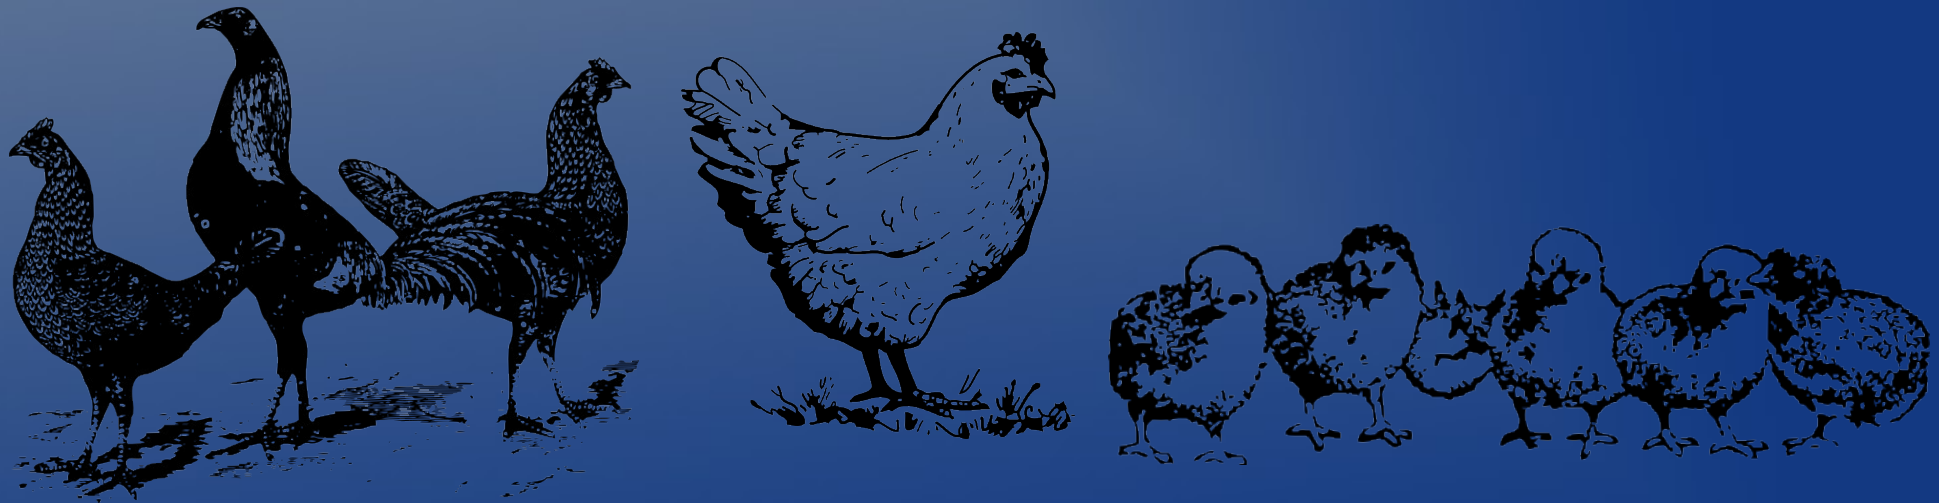

The Synchronic Chicken Is A Dangerous Chicken

- What if we send back the wrong egg?
- What if we send back every egg this chicken lays?

The Synchronic Chicken Is A Dangerous Chicken

- Couldn't we be overrun by chickens?
- How do we prevent this nightmare?

WE ALREADY DID!

- Perhaps we recall that when we first got the egg in the past there was something written on it.
- All we have to do is remember what that was.

OR BETTER YET!

- We could copy what's written on the egg on to a note.
- And attach that note to the baby chick's leg, as if it were a carrier pigeon.
- That way, our future selves will know for sure which egg to send back.

This Message Is Synchronic Data

- Paradoxically sensitive information about the future & past that guides us in the creation of synchronic matter, synchronic energy and/or more synchronic data.

It's the Age-Old Adage

- Which came first, the Chicken or the Egg?

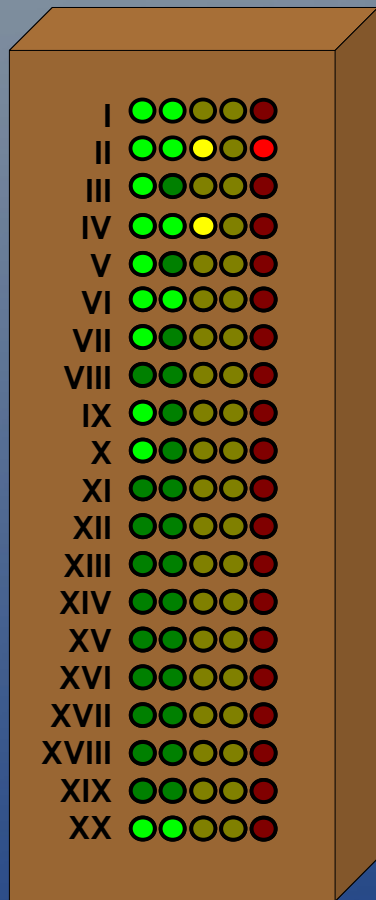

The Same with Our Synchronic Data

- Who wrote the message first?
- We of the present, with the egg?
- Or we of the past, with the chicken?

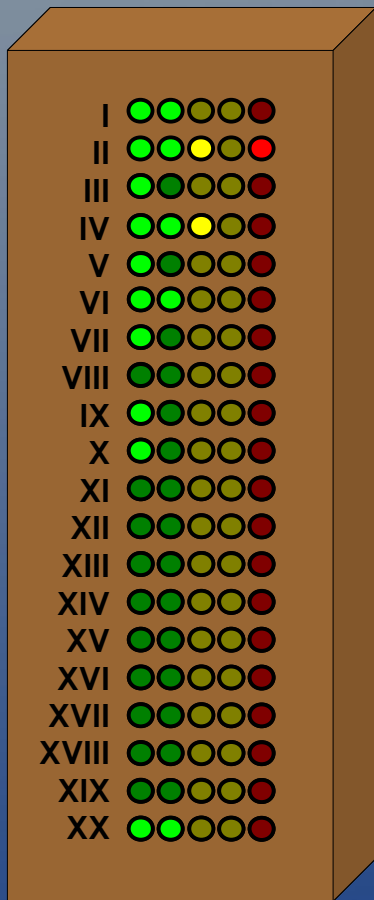

This Is How the Ansari Anachronometer Works

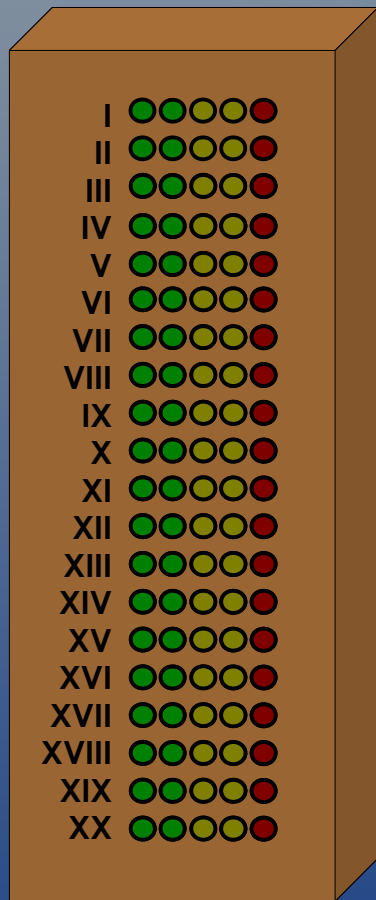

- It is a storehouse of synchronic data.
- As the temps meddle in the past, the LEDs begin to light up.
- This informs them of the risks they're taking with the timeline.
- And they adjust their behavior accordingly.

Once the Temps Return to the Home Office

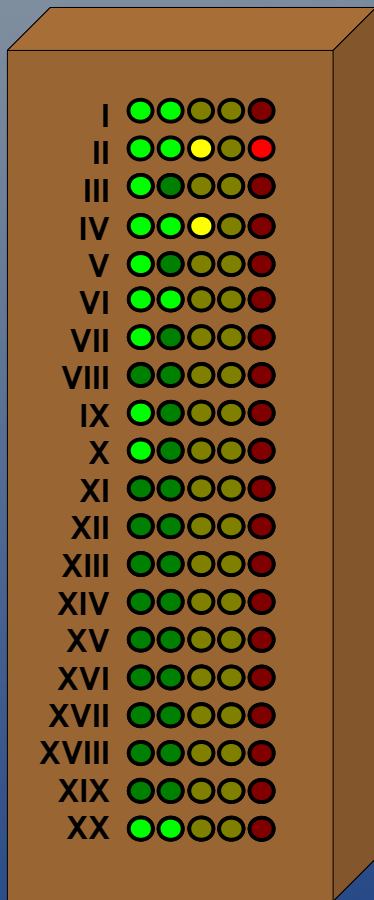

- We record all the data on the anachronometer, including:
- Where and when the temps arrived in the past;
- Which temps were involved;
- And when each LED lit up, the precise order and timing.

The Data Is Then Sent Back To the Beginning of the Work Day

- So that the temp manager can pre-program the anachronometer with its lighting cues...
- ...And gather the appropriate temps for their impending assignment.

But How Do We Know It Works?

- If the LEDs are just lighting up in a random pattern, how do we know it is accurately measuring pressure on the timeline?
- Do you recall our chicken nightmare?

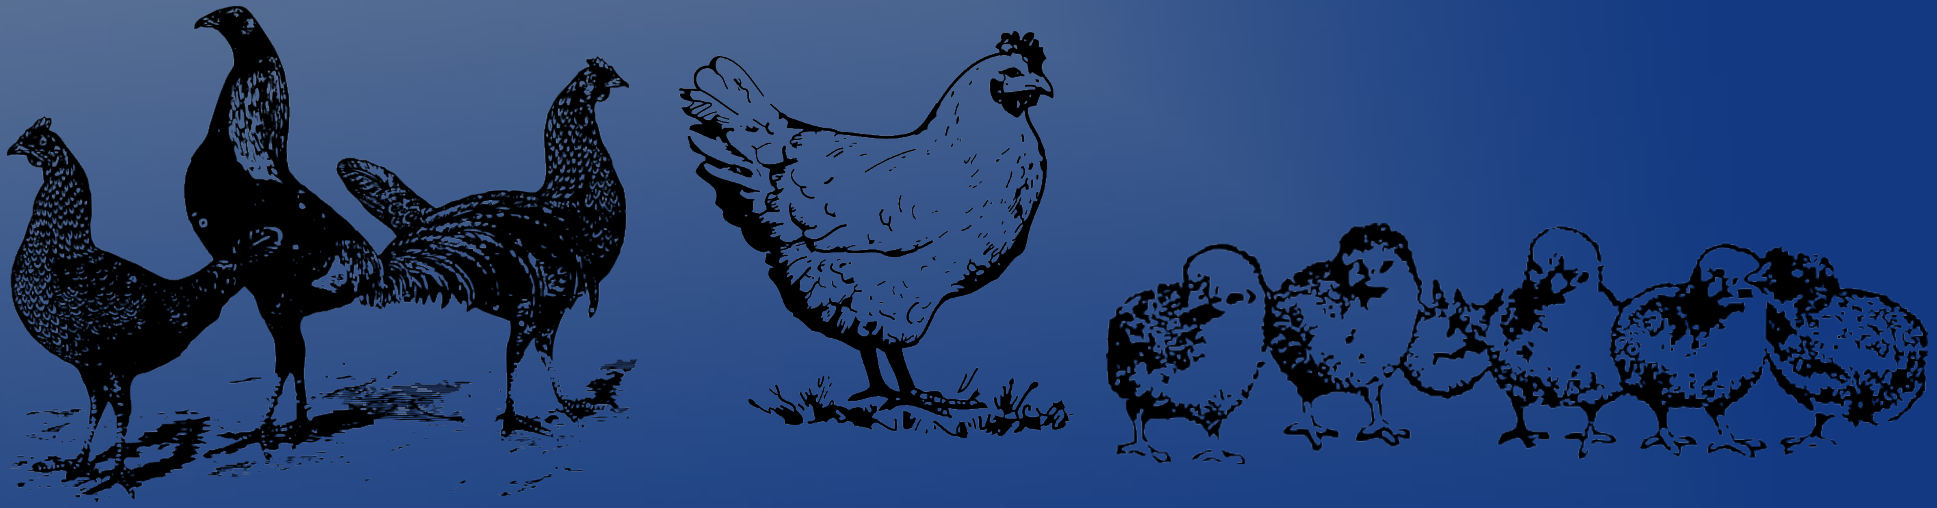

We Know It Works Because It Already Has™

- The same way we know we sent the right egg back.
- Or the right number of eggs.

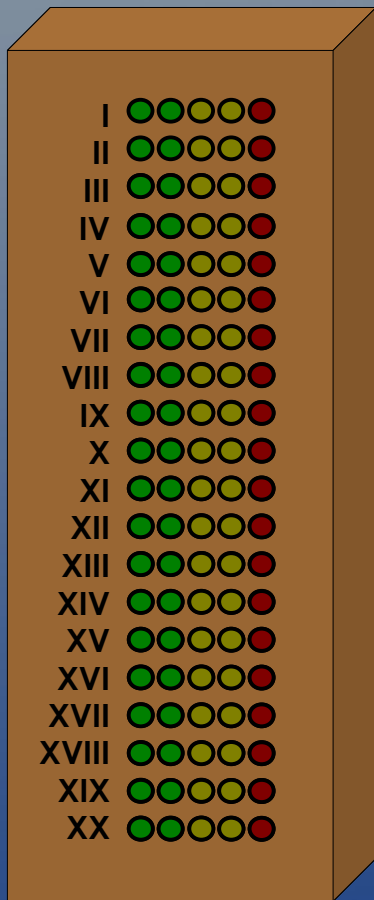

Because If We Didn't Our Present Would Be Very Different Indeed

- If the Anachronometer wasn't an accurate measure of temporal stress...
- ...And the temps were acting on this misinfromation...

The Anasari Anachronometer

Another precision tool
to protect the future of our past
from

Browne Chronometric Engineering, Inc.

You know it works,
because it already has.TM
